

# Design Your Energy

## A Better Tomorrow

The Osaka Gas Group's brand slogan is "Design Your Energy—A Better Tomorrow." The slogan's central message is the Group's pledge to be a vanguard in creating new value in fields such as energy and to stand behind its customers in contributing to their comfortable lifestyles and business prosperity.

### International Energy Businesses along the Energy Value Chain

#### 1990— Resource Development

We invest in a number of gas fields and other resource development projects, a venture we first undertook as a Japanese energy utility.

#### 2004— Overseas IPP Business

Leveraging the expertise cultivated through domestic independent power producer (IPP) projects, we are reinforcing the foundations for our overseas IPP business.

#### 2008— Overseas Natural Gas Infrastructure Business

We are progressively investing in pipelines and liquefied natural gas (LNG) terminals.

#### 1960— LPG Business

We mainly sell liquid petroleum gas (LPG) to customers outside our city gas supply area.

#### 1975— Industrial Gas Business

We produce and market industrial gases while effectively utilizing LNG cryogenics technologies.

#### 2002— Electric Power Business

Following the deregulation of the electricity market, we started participating in the electricity wholesale business, and later began operating large-scale natural gas power plants in 2009.

At the Osaka Gas Group, we feel that it is our mission as a gas supplier to provide the Kansai region with a stable supply of city gas. While striving to fulfill this mission, we have also boldly ventured into business areas peripheral to our gas business, allowing us to develop the diverse business foundations we possess today. Further, as awareness regarding the importance of energy security rises, a number of significant opportunities are emerging for the Group to develop broad energy businesses taking advantage of the potential of natural gas.

### Domestic Energy Businesses

Founding  
1905

## Gas Business in the Kansai Region

We provide our customers with a whole range of services for gas; from production and supply to marketing, installation of house-pipes, and selling gas appliances.

### Environment and Non-Energy Businesses

#### 1947— Material Solutions Business

Our material solutions business began with the sales of gas byproducts and now has grown to include the production and sales of functional materials and others developed by evolving coal chemistry technologies initially created for the production of coal gas.

#### 1965— Real Estate Business

The real estate business began with real estate management and expanded to include development, leasing, sales, and management of real estate as well as management of a research park.

#### 1983— IT Business

In our information technology (IT) business, we provide a wide range of services including IT system design, consulting, development, operation, and maintenance.

#### 2006— Wind Power Generation Business

#### 2012— Solar Power Business

We are working to introduce renewable energy sources in Japan and overseas.
